Let's Start!

Is Acceptance Testing That Important?

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Participate in the improvement of IT contracts, establishing technical clauses that respond to the needs of the negotiating agents, based on current laws on contracting.

Can Do Statements:

- I can talk about the importance of the acceptance testing procedure.
- I can say why acceptance testing works as a collaborative process.
- I can discuss consequences or remedies for acceptance testing procedures.

Ask your partner:

- How important do you think it is to test a product before buying it?
- Is it necessary to test every product or service you get? Why? Why not?

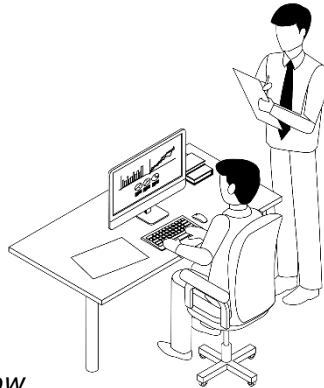

Let's Explore!

A vendor is talking to his software customer about an acceptance testing they need to perform.

* A "vendor" is a provider or seller of a good or service.

Instructions: Read the text below.

Vendor: Once this software license agreement is signed by you, we'll be allowed to move on to the acceptance testing.

Tom: To what?

Vendor: The acceptance testing phase. A procedure which allows you to test the licensed software to verify that it meets the specified requirements. This is a very important step because you, as the consumer of the product, need to test it and ensure that it is what you need and that you can use it properly.

Tom: I see! I had some problems before with another piece of software because I hadn't run any test like this.

Vendor: I've heard that many times. The last client I talked to had purchased software with no license and wanted us to perform an acceptance test for him. He wanted someone to help him.

Tom: Can you get help for this kind of testing?

Vendor: Sure! This procedure can be a collaborative process, with the customer being assisted by the vendor, which would be me in this case. The customer has to give the software vendor written notifications of the deficiencies found during the testing, so he can correct them and resubmit the software for further testing.

Tom: So, I have to let the vendor know whether the software passes or fails the acceptance testing.

Vendor: That's right. Last semester, we had some problems because some of the purchasers hadn't complied with this requirement and some defective software ended up in stores.

Tom: What are the consequences?

Vendor: Well, if the testing procedure is successful, there may be a payment milestone or other consequences like the commencement of a limited warranty period. However, if there is a failure, the customer receives compensation. He can either cancel the software license purchased and receive a refund of prepaid fees, or negotiate revisions to the acceptance criteria.

Let's Practice!

Acceptance testing procedure is considered a collaborative process.

Instructions: Read the paragraph. Underline all the mistakes in the paragraph.

Tom: Can you get help for this kind of testing?

Vendor: Sure. This procedure are considered a collaborative process where t he customer are assisted by the vendor, which would be me. During the process, written notifications are gave to me in order to report the deficiencies that is found during the testing; then they can be correct as far as possible.

Let's Practice!

What are the consequences?

Instructions: Classify the sentences by writing the number of the sentence in the correct category.

1. A procedure performed by the purchaser before buying the product or service.
2. No remedy had been issued to the customer.
3. The customer had canceled the purchase when he received a refund of prepaid fees.
4. The commencement of a limited warranty period had begun.
5. The customer had received compensation when there was some kind of failure.
6. If the license software fails, there is nothing the vendor can do about it.
7. It allows you to test licensed software to verify that it meets the specified requirements.
8. They hadn't negotiated revisions to the acceptance criteria.
9. This process is important because it allows the technician to test whether the final product meets the consumers' requirements.

Acceptance testing concept	Possible consequences of following acceptance testing procedures	Not possible consequences of following acceptance testing procedures

Extension Activity

Relevance of the acceptance testing procedure

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about acceptance testing procedure and its relevance.
- Describe the importance in a paragraph.
- Write a paragraph giving the reasons why it is important and its results.
- Share the paragraph with your classmates. .

Self-Assessment

Yes No

- I look for information about the acceptance testing procedure.
- I describe the importance of the acceptance testing procedure.
- I write a paragraph.
- I share the paragraph with my classmates.

Target Words

- **prepaid fee** (noun): money paid prior to actually acquiring a product or service.
e.g. If there is some kind of failure, the customer receives compensation. He can either cancel the software license purchased and receive a refund of prepaid fees, or negotiate revisions to the acceptance criteria.
- **acceptance testing** (noun): test conducted to establish whether the requirements of a service or a product are met in a contract.
e.g. Once you sign this software license agreement, we're going to move on to the acceptance testing.
- **licensed software** (noun): software with legal permits for its use and distribution.
e.g. This is a procedure which allows you to test the licensed software and to verify that it meets the specified requirements.
- **purchaser** (noun): the person or entity who buys a product.
e.g. Last semester, we had some problems because some of the purchasers hadn't complied with this requirement and some defective software ended up in stores.
- **milestone payment** (noun): financial payment given for a product or service when it meets the expected requirements.
e.g. If the testing procedure is successful, there may be a payment milestone or other consequences like the commencement of a limited warranty period.
- **refund** (noun): an amount returned to the buyer.
e.g. If there is some kind of failure, the customer receives compensation. He can either cancel the software license purchased and receive a refund of prepaid fees, or negotiate revisions to the acceptance criteria.

Learning Points

Past perfect tense

The past perfect tense is used to talk about actions in the past that happened before another action.

When we want to express two actions that happened at different times in the past, we use the **past perfect** tense to talk about the **first action**, and the **simple past** tense to talk about the second action. Let's take a look at the basic structure and an example:

PAST PERFECT STRUCTURE			
Subject	auxiliary (had)	past participle	complement
<i>They</i>	<i>hadn't</i>	<i>gotten</i>	<i>such results.</i>

CONTRAST – TWO ACTIONS IN THE PAST	
SECOND ACTION (simple past)	FIRST ACTION (past perfect)
<i>They had problems</i>	<i>because they hadn't run the acceptance testing.</i>

Examples

- I had some problems before with another software because I hadn't run any test like this.*
- Last semester we had some problems because some of the purchasers hadn't complied with this requirement and some defective software ended up in stores.*

Acceptance Testing Fundamentals

Acceptance Testing is the phase of software testing when a software tool is tested for acceptability. The objective of such a test is to assess the system's conformity with business needs and to evaluate whether it is acceptable for release.

INTERNAL ACCEPTANCE TESTING	
Also known as alpha testing, it is undertaken by affiliates of the company or organization that developed the software but are not directly involved with the project.	
EXTERNAL ACCEPTANCE TESTING	
It is performed by people who are not involved with the company that developed the software in any way.	
CUSTOMER ACCEPTANCE TESTING	USER ACCEPTANCE TESTING
Performed by the customers of the software developers. They are the ones who requested the development of the software by the company. This situation occurs when the software is not owned by the company.	Also known as beta testing, it is undertaken by the end users of the software. This can be the customers themselves or the customers' customers.
